

Scenario:

You are a mother of three children and your eldest child is enrolling at the University of South Carolina of Columbia. You want your son to be on top of his work and the task he needs to enroll in the university. You would want to know what he needs to check off his list and when they need to be checked off.

Task 1:

Open up the checklist to the task you need to complete in order to be fully enrolled in the University.

Task 2:

Have the calendar opened up and alert yourself when the due date is coming up, maybe in a week or earlier, or maybe even later.

Task 3:

Upload documents when the alert rings or even before the alert rings.

Notes:

What changes would you make to your application:

1. Make the home screen easy and accessible to any user regardless of age.
2. Make documentation easier to upload by uploading any type of file regardless of phone or computer file.
3. Make the alert system go to your phone and not just to the application.

What would you keep the same in your applications:

1. Keep the login screen the same for easy and secure for parents and students.
2. Keep the color scheme the same to appeal to all audiences.
3. Keep the tabs organized and in alphabetical order.
